EMPLOYMENT

VISITING RESEARCHER | ALBERT-LUDWIGS-UNIVERSITÄT FREIBURG

Hosted by Dr. Joschka Boedecker | DAAD Scholar | Freiburg, Germany | 2023

- Deep Reinforcement Learning (RL) research for integrating very noisy electroencephalogram (EEG) signals decoded from a patient's brain, which includes preference and failure information into a framework for skill learning on assistive robots.
- Developed a novel learning algorithm called Composite Soft Actor Critic to better handle noisy reward signals.

MACHINE LEARNING RESEARCHER | KINDRED AI, PART OF OCADO GROUP

Manager: Dr. James Bergstra, Artificial Intelligence Research Team | Toronto, Canada | 2017-2020

- Designed, implemented and evaluated learning algorithms and robot infrastructure.
- Devised Artificial Intelligence (AI) techniques for SORT, a piece-picking robot that grasps, scans and stows items in warehouses for clothing stores like GAP and American Eagle.
- Supported design and development of [SenseAct](#), an open-source computational framework for physical robot learning tasks. SenseAct facilitates the easy, systematic design of robotic tasks and reproducible real-world reinforcement learning.
- Developed [RLScan](#), which uses deep reinforcement learning to learn a closed-loop control scanning policy conditioned on a real-time video feed. It was trained end-to-end in production, learning from a fleet of robots across multiple warehouses.
- RLScan achieved optimal barcode scanning behavior for handling complex product assortments. This is among the **first successful demonstrations of vision-based deep RL in warehouse automation**.

ACADEMIC EXPERIENCE

GRADUATE RESEARCH ASSISTANT FELLOW | UNIVERSITY OF ALBERTA

RLAI Lab, University of Alberta | 2016-2017, Sept 2020 to Present

- Design and development of Reinforcement Learning (RL) algorithms and continual learning systems for real-world robots 2016
- Developed learning methods that would allow an amputee to use their non-amputated arm to teach their prosthetic arm how to move through a wide range of coordinated motions and grasp patterns.
- Collaborated on a medical study to assess functional gain with the use of assistive robots in patients affected by stroke or spasticity. Built tools to analyze the recorded sensory information and set up a robot interface for 12 patients.
