## **EMPLOYMENT**

#### VISITING RESEARCHER | ALBERT-LUDWIGS-UNIVERSITÄT FREIBURG

Hosted by Dr. Joschka Boedecker | DAAD Scholar | Freiburg, Germany | 2023

- Deep Reinforcement Learning (RL) research for integrating very noisy electroencephalogram (EEG) signals decoded from a patient's brain, which includes preference and failure information into a framework for skill learning on assistive robots.
- Developed a novel learning algorithm called Composite Soft Actor Critic to better handle noisy reward signals.

#### MACHINE LEARNING RESEARCHER | KINDRED AI, PART OF OCADO GROUP

Manager: Dr. James Bergstra, Artificial Intelligence Research Team | Toronto, Canada | 2017-2020

- Designed, implemented and evaluated learning algorithms and robot infrastructure.
- Devised Artificial Intelligence (AI) techniques for SORT, a piece-picking robot that grasps, scans and stows items in warehouses for clothing stores like GAP and American Eagle.
- Supported design and development of **SenseAct**, an open-source computational framework for physical robot learning tasks. SenseAct facilitates the easy, systematic design of robotic tasks and reproducible real-world reinforcement learning.
- Developed **RLScan**, which uses deep reinforcement learning to learn a closed-loop control scanning policy conditioned on a real-time video feed. It was trained end-to-end in production, learning from a fleet of robots across multiple warehouses.
- RLScan achieved optimal barcode scanning behavior for handling complex product assortments. This is among the first successful demonstrations of vision-based deep RL in warehouse automation.
